HEALTHCARE OVERVIEW

HEALTHCARE STATISTICS

India Population: ~ 120 Crores
Population lives in Urban area: ~ 30%
Population lives in Rural area: ~ 70%

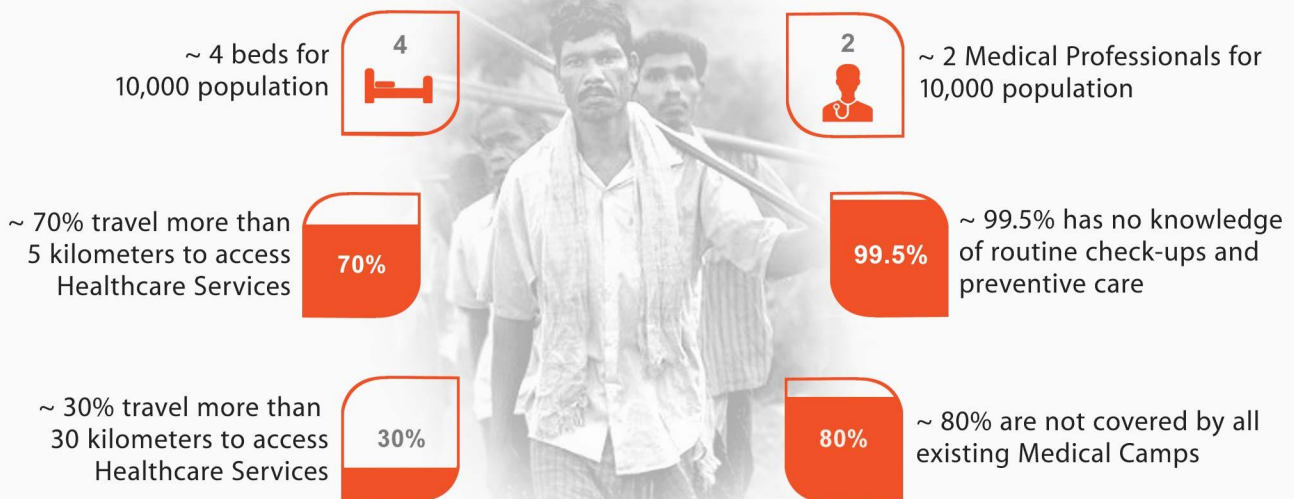

India should double the number of doctors, triple the number of nurses, and quadruple the number of paramedics.

Projected national income loss for India by 2015 due to heart disease, stroke and diabetes ~ ₹ 15 lakh crores.

GAP IN RURAL & UNDERSERVED AREAS

ALARMING FACTS

India is already in the forefront to become world's capital of coronary heart disease and diabetes as WHO predicted.

Besides the really alarming statistics, it is a bitter fact that almost everyone in present day society are exposed to pollutions - air, water, food, medications and whatnot... in addition to the work stress, irregular work / food / sleep timings that leads to serious health issues even in the younger generations.

India set to be 'heart disease capital of world', say doctors 

Indian Men at risk 
78% of men between age 30 & 34 run the risk of a heart attack

India is world's coronary, diabetic capital, says expert. 

CARDIOSLEEVE
